Since 1976 keeping our clients on solid ground

**PERMAFROST**  
ENVIRONMENTAL CONSULTING INC.

# New Release

## Pipelines in Permafrost and Freezing Ground Engineering Resource Library and Database Indexes

The timely release of the fourteen-volume book set provides engineers and geoscientists working in universities, research institutes, corporations, governments and regulatory bodies with an in-depth examination of the interdependence between cold climate infrastructure and the behaviour of freezing soils and permafrost-affected soils.

### **The Engineering Resource Library provides the user with additional insights into intricate concepts such as**

- Soil strain and soil creep
- Hydrological and micro-morphological properties
- Frost heave and frost bulb growth
- Thaw consolidation and pipeline relaxation
- Pressure in freezing soils and permafrost-affected soils
- Bending stresses in buried pipelines
- Uplift resistance of pipelines in permafrost

The Library may be equipped with a suite of program modules and databases.

For further information please contact Dr. White by email
